Installation Procedure for Ubuntu on Niveus and Icebreaker

For installing ubuntu on these machines you have to enable some kernel options while booting from a live USB/ live CD.

- Immediately after the bios screen you will get a purple screen with keyboard logo at the bottom. Hit any key at this moment. This will take you to a menu where you have select a language.

- Select language and press enter. This will get you to the installation menu.

- Press F6. This will open a menu at the bottom which will allow you to set kernel options. Select nomodeset and press escape to close this menu.

- Now select Install ubuntu.
